Species group summary product updates

1. Additional season. There are now two products for each species group - a spring (2010-2017) and a fall (2010-2016) product - representing total biomass, species richness, Shannon diversity, Simpson diversity, core biomass area - Northeast scale, core biomass area - Mid-Atlantic scale, and core biomass area - Northeast Shelf scale.

2. Species group membership. Species group membership has not changed from v2.0, but offshore hake was added to the following groups: All, Demersal, NEFMC small mesh multispecies FMP, EFH species, Distribution vulnerable to climate changes. Spotted hake, which was previously only included in the "All" fish species group, was added to the Demersal group.
